

what is mindfulness?

Have you ever noticed that when you are doing quite familiar and repetitive tasks, like driving your car, or vacuuming, that you mind is often miles away thinking about something else? You may be fantasising about going on a vacation, worrying about some upcoming event, or thinking about any number of other things.

In either case you are not focusing on your current experience, and you are not really in touch with the 'here and now.' This way of operating is often referred to as **automatic pilot** mode.

Mindfulness is the opposite of automatic pilot mode. It is about experiencing the world that is firmly in the 'here and now.' This mode is referred to as the **being** mode. It offers a way of freeing oneself from automatic and unhelpful ways of thinking and responding.

Benefits of Mindfulness

By learning to be in mindful mode more often, it is possible to develop a new habit that helps to weaken old, unhelpful and automatic thinking habits. For people with emotional problems, these old habits can involve being overly pre-occupied with thinking about the future, the past, themselves, or their emotions in a negative way. Mindfulness training in this case does not aim to immediately control, remove, or fix this unpleasant experience. Rather, it aims to develop a skill to place you in a better position to break free of or not 'buy into' these unhelpful habits that are causing distress and preventing positive action.

Core Features of Mindfulness

Observing

The first major element of mindfulness involves observing your experience in a manner that is more direct and sensual (**sensing mode**), rather than being analytical (**thinking mode**). A natural tendency of the mind is to try and think about something rather than directly experience it. Mindfulness thus aims to shift one's focus of attention away from thinking to simply observing thoughts, feelings, and bodily sensations (e.g., touch, sight, sound, smell, taste) with a kind and gentle curiosity.

Describing

This aspect of mindfulness relates to noticing the very fine details of what you are observing. For example, if you are observing something like a tangerine, the aim is to describe what it looks like, what is its shape, colour, and texture. You might place a descriptive name to it, like "orange", "smooth", or "round". The same process also can be applied to emotions (e.g. "heavy", "tense").

Participating Fully

An aim of mindfulness is to allow yourself to consider the whole of your experience, without excluding anything. Try to notice all aspects of whatever task or activity you are doing, and do it with your full care and attention.

Being Non-Judgemental

It is important to adopt an accepting stance towards your experience. A significant reason for prolonged emotional distress relates to attempts to avoid or control your experience. When being more mindful, no attempt is made to evaluate experiences or to say that they are good, bad, right, or wrong, and no attempt is made to immediately control or avoid the experience. Accepting all of one's experience is one of the most challenging aspects of mindfulness, and takes time and practice to develop. Bringing a kind and gentle curiosity to one's experience is one way of adopting a non-judgmental stance.

Focusing on One Thing at a Time

When observing your own experience, a certain level of effort is required to focus your attention on only one thing at a time, from moment to moment. It is natural for distracting thoughts to

emerge while observing, and there is a tendency to follow and 'chase' these thoughts with more thinking. The art of 'being present' is to develop the skill of noticing when you have drifted away from the observing and sensing mode, into thinking mode. When this happens it is not a mistake, but just acknowledge it has happened, and then gently return to observing your experience.

How to Become Mindful

Mindfulness is a skill that takes time to develop. It is not easy, and like any skill it requires a certain level of effort, time, patience, and ongoing practice.

Mindfulness can be taught in a number of ways. Meditation is one of the key techniques used in mindfulness training, but not the only technique. Contact your mental health professional for further information on mindfulness training and whether it may be suited to your needs.

Mindfulness Exercises

Mindfulness Meditation

Find a place where you can sit quietly and undisturbed for a few moments. To begin, you might want to set a timer for about 10 minutes, but after some experience you should not be too concerned about the length of time you spend meditating.

Begin by bringing your attention to the present moment by noticing your breathing. Pay attention to your breath as it enters and then leaves your body. Before long, your mind will begin to wander, pulling you out of the present moment. That's ok. Notice your thoughts and feelings as if you are an outside observer watching what's happening in your brain. Take note, and allow yourself to return to your breathing.

Sometimes you might feel frustrated or bored. That's fine--these are just a few more feelings to notice. Your mind might start to plan an upcoming weekend, or worry about a responsibility. Notice where your thoughts are going, and accept what's happening.

Whenever you are able to, return your concentration to your breathing. Continue this process until your timer rings, or until you are ready to be done.

Body Scan

During the body scan exercise you will pay close attention to physical sensations throughout your body. The goal isn't to change or relax your body, but instead to notice and become more aware of it. Don't worry too much about how long you practice, but do move slowly.

Begin by paying attention to the sensations in your feet. Notice any sensations such as warmth, coolness, pressure, pain, or a breeze moving over your skin. Slowly move up your body--to your calves, thighs, pelvis, stomach, chest, back, shoulders, arms, hands, fingers, neck, and finally your head. Spend some time on each of these body parts, just noticing the sensations.

After you travel up your body, begin to move back down, through each body part, until you reach your feet again. Remember: move slowly, and just pay attention.

Mindful Eating

Choose a food you would like to practice with (preferably something you can hold in your hand without getting messy). Something as simple as a single raisin will work well. Move slowly through these steps, taking a moment to focus on each one.

Before you pick up your food, notice how it looks on the table in front of you. Notice its color, how the light reflects from its surface, and its size.

Mindfulness Exercises

Now, pick up the food. Notice the weight, and how the food feels against your skin. Roll the object between your fingers, or roll it in your hand, and notice its texture. Notice if it's smooth, rough, slick, soft, firm or if it has any other properties. Hold the food to your nose, and pay attention to its smell.

Next, place the food in your mouth, on your tongue, but don't eat it. Notice how it feels in your mouth. Does the texture feel the same as on your hand? What do you taste? Roll the food around in your mouth and pay attention to the feeling.

Finally, begin to slowly chew your food. Notice how your teeth sink into it, and how the texture is different inside. Pay close attention to the flavor, and how it spreads across your tongue. Notice how your body changes—does your mouth fill with saliva? Does your tongue feel hot or cold? Continue to chew your food, paying close attention to the many sensations as you finish.

Five Senses

Use this exercise to quickly ground yourself in the present when you only have a moment. The goal is to notice something that you are currently experiencing through each of your senses.

What are 5 things you can see? Look around you and notice 5 things you hadn't noticed before. Maybe a pattern on a wall, light reflecting from a surface, or a knick-knack in the corner of a room.

What are 4 things you can feel? Maybe you can feel the pressure of your feet on the floor, your shirt resting on your shoulders, or the temperature on your skin. Pick up an object and notice its texture.

What are 3 things you can hear? Notice all the background sounds you had been filtering out, such as an air-conditioning, birds chirping, or cars on a distant street.

What are 2 things you can smell? Maybe you can smell flowers, coffee, or freshly cut grass. It doesn't have to be a nice smell either: maybe there's an overflowing trash can or sewer.

What is 1 thing you can taste? Pop a piece of gum in your mouth, sip a drink, eat a snack if you have one, or simply notice how your mouth tastes. "Taste" the air to see how it feels on your tongue.

The numbers for each sense are only a guideline. Feel free to do more or less of each. Also, try this exercise while doing an activity like washing dishes, listening to music, or going for a walk.

Informal Mindfulness Practice

1. Mindfulness in Your Morning Routine

Pick an activity that constitutes part of your daily morning routine, such as brushing your teeth, shaving, making the bed, or taking a shower. When you do it, totally focus attention on what you're doing: the body movements, the taste, the touch, the smell, the sight, the sound, and so on. Notice what's happening with an attitude of openness and curiosity.

For example, when you're in the shower, notice the sounds of the water as it sprays out of the nozzle, as it hits your body, and as it gurgles down the drain. Notice the temperature of the water, and the feel of it in your hair, and on your shoulders, and running down your legs. Notice the smell of the soap and shampoo, and the feel of them against your skin. Notice the sight of the water droplets on the walls or shower curtain, the water dripping down your body and the steam rising upward. Notice the movements of your arms as you wash or scrub or shampoo.

When thoughts arise, acknowledge them, and let them come and go like passing cars. Again and again, you'll get caught up in your thoughts. As soon as you realize this has happened, gently acknowledge it, note what the thought was that distracted you, and bring your attention back to the shower.

2. Mindfulness of Domestic Chores

Pick an activity such as ironing clothes, washing dishes, vacuuming floors—something mundane that you have to do to make your life work—and do it mindfully. For example, when ironing clothes, notice the color and shape of the clothing, and the pattern made by the creases, and the new pattern as the creases disappear. Notice the hiss of the steam, the creak of the ironing board, the faint sound of the iron moving over the material. Notice the grip of your hand on the iron, and the movement of your arm and your shoulder.

If boredom or frustration arises, simply acknowledge it, and bring your attention back to the task at hand. When thoughts arise, acknowledge them, let them be, and bring your attention back to what you're doing. Again and again, your attention will wander. As soon as you realize this has happened, gently acknowledge it, note what distracted you, and bring your attention back to your current activity.

3. Mindfulness of Pleasant Activities

Pick an activity you enjoy such as cuddling with a loved one, eating lunch, stroking the cat, playing with the dog, walking in the park, listening to music, having a soothing hot bath, and so on. Do this activity mindfully: engage in it fully, using all five of your senses, and savor every moment. If and when your attention wanders, as soon as you realize it, note what distracted you, and re-engage in whatever you're doing.

Simple Ways to Get Present

Take Ten Breaths

This is a simple exercise to center yourself and connect with your environment. Practice it throughout the day, especially any time you find yourself getting caught up in your thoughts and feelings.

1. Take ten slow, deep breaths. Focus on breathing out as slowly as possible until the lungs are completely empty—and then allow them to refill by themselves.
2. Notice the sensations of your lungs emptying. Notice them refilling. Notice your rib cage rising and falling. Notice the gentle rise and fall of your shoulders.
3. See if you can let your thoughts come and go as if they're just passing cars, driving past outside your house.
4. Expand your awareness: simultaneously notice your breathing and your body. Then look around the room and notice what you can see, hear, smell, touch, and feel.

Drop Anchor

This is another simple exercise to center yourself and connect with the world around you. Practice it throughout the day, especially any time you find yourself getting caught up in your thoughts and feelings.

1. Plant your feet into the floor.
2. Push them down—notice the floor beneath you, supporting you.
3. Notice the muscle tension in your legs as you push your feet down.
4. Notice your entire body—and the feeling of gravity flowing down through your head, spine, and legs into your feet.
5. Now look around and notice what you can see and hear around you. Notice where you are and what you're doing.

Notice Five Things

This is yet another simple exercise to center yourself and engage with your environment. Practice it throughout the day, especially any time you find yourself getting caught up in your thoughts and feelings.

1. Pause for a moment
2. Look around and notice five things that you can see.
3. Listen carefully and notice five things that you can hear.
4. Notice five things that you can feel in contact with your body (for example, your watch against your wrist, your trousers against your legs, the air on your face, your feet upon the floor, your back against the chair).
5. Finally, do all of the above simultaneously

MINDFUL BREATHING TIPS

Mindful breathing exercises (when practiced regularly) have been proven to reduce stress and promote a feeling of calm. They can be used anywhere and may be of significant benefit to individuals struggling with emotion regulation. Relaxed, abdominal breathing (as opposed to shallow, chest breathing) greatly increases the effectiveness of these exercises.

COUNTING BREATHING

Breathe in.....Breathe out, say, "One."
Breathe in.....Breathe out, say, "Two."

Continue until "ten" is reached, then start over.

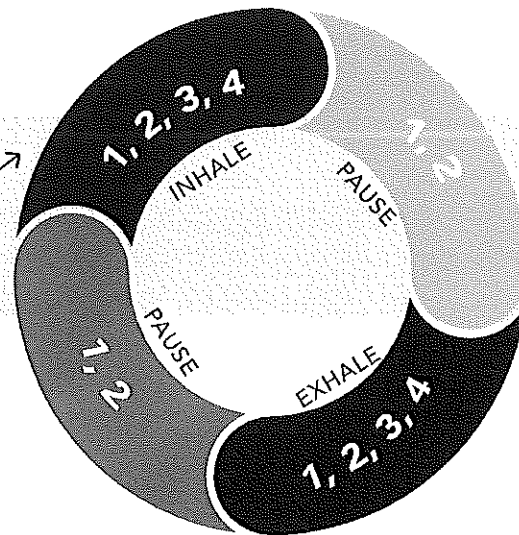

BECOMING CALM BREATHING

Breathe in, think or say, "I am."
Breathe out, think or say, "becoming calm"
or "letting go."

Use any phrase that promotes relaxation.

CYCLE BREATHING

START HERE

Inhale (count to four),
Hold (count to two),
Exhale (count to four),
Hold (count to two).

RAISED ARM BREATHING

Sit with a forearm resting on each leg, palms down.
Breathe in (bend elbows and raise back of hands to shoulders).
Breathe out (return arms to lap).

WALKING BREATHING

Walk very slowly, synchronizing your breath with your steps: one step for each inhalation, one step for each exhalation.

Five Senses Mindfulness Exercise

Stressed out? Can't stop worrying or thinking about something? Can't focus? Feeling upset? Sometimes we feel like we're caught up in a tornado of thoughts and emotions. The exercise below is a quick and easy method for feeling more centered on a tough day. It's also great to practice at times when you're not as stressed so you know exactly how to use it when you need it the most.

If begin to notice thoughts coming into your mind, that is COMPLETELY normal. Our brains are designed to think but we can learn to refocus our attention. Take this as an opportunity to be kind to yourself and not judge. Just notice that you are having thoughts, then, redirect your attention back to the present moment.

1. **Sit in a comfortable upright position** with your feet planted flat on the ground. Rest your hands on your thighs or on your desk.
2. **Notice your breathe.** No need to breathe in any particular way. Just bring attention to each part of the breath- the inhale, exhale, and space in between.
3. **Bring awareness to each of your 5 senses.** One at a time, for about one minute each. The point here is to focus on the present moment and how each sense is being activated in that moment. The order in which you pay attention to each sense does not matter.

Hear: Begin to notice all of the sounds around you. Try not to judge the sounds- just notice them. They are not good or bad, they just are. Sounds might be internal, like breathing or digestion. Sounds might be close by or more distant like the sound of traffic. Are you now hearing more than you were before you started? You may begin to notice subtle sounds you did not hear before. Can you hear them now?

Smell: Now shift your attention to notice the smells of your environment. Maybe you smell food. You might become aware of the smell of trees or plants if you are outside. You might notice the smell of books or paper. Sometimes closing your eyes can help sharpen your attention.

See: Observe your surrounding and notice the colors, shapes and textures. If you really look, you may notice things that have gone unnoticed.

Taste: You can do this one even if you have food in your mouth. You may notice an aftertaste of a previous drink or meal. You can just notice your tongue in your mouth, your saliva, and your breath as you exhale. We have tastes in our mouth that often go unnoticed. You can run your tongue over your teeth and cheeks to help you become more aware.

Touch: Last one. Bring your attention to the sensations of skin contact with your chair, clothing, and feet on the floor. You can notice the pressure between your feet and the floor or your body and the chair. You can observe temperature like the warmth or coolness of your hands or feet. You might take time to feel the textures that you noticed by sight a moment ago. You can feel several objects on your desk to fully focus your attention on the present.

When finished, pause to notice how your body feels in this moment. Compare how you feel now with how you felt 5 minutes ago- what has changed? Try this exercise next time you're feeling overwhelmed. This can be useful to use before a test or speech, too!
